

Arrow Function:

Arrow functions allow a short syntax for writing function expressions.

You don't need the **function** keyword, the **return** keyword, and the **curly brackets**.

```
// Previous ES5 code  
var x = function(x, y) {  
    return x * y;  
}
```

1. Arrow functions allow a short syntax for writing function expressions.

2. You don't need the function keyword, the return keyword, and the curly brackets.

Syntax:

```
// After change to ES6 Code will be  
const x = (x, y) => x * y; -->
```

Code with Output:

Example1:
