

HTML_JS_FILE_RUN

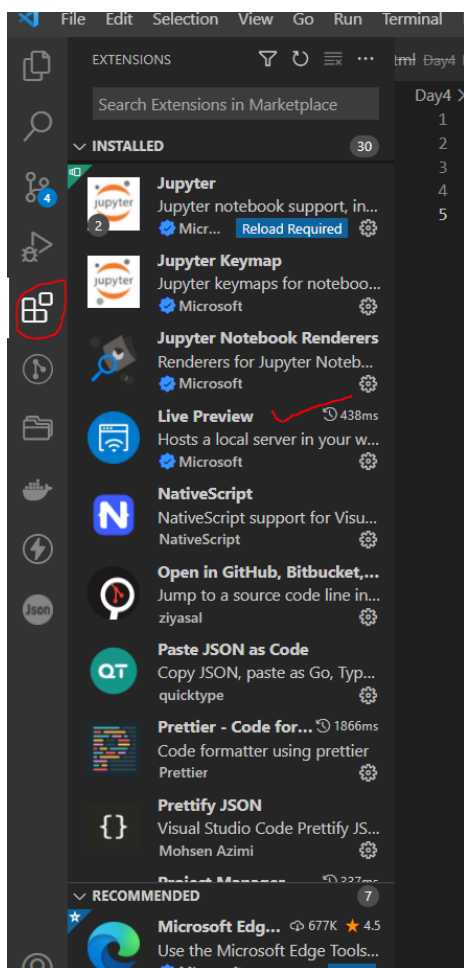

How to run the project:

There are two ways to run this project: one is through VS Code extensions and another is copy the folder path then paste it in your browser. I will share the details please follow

VS CODE EXTENSION:

First you need to click the extension option and search “**Live Preview**” and you will see the Live Preview extension then install it. See the below image

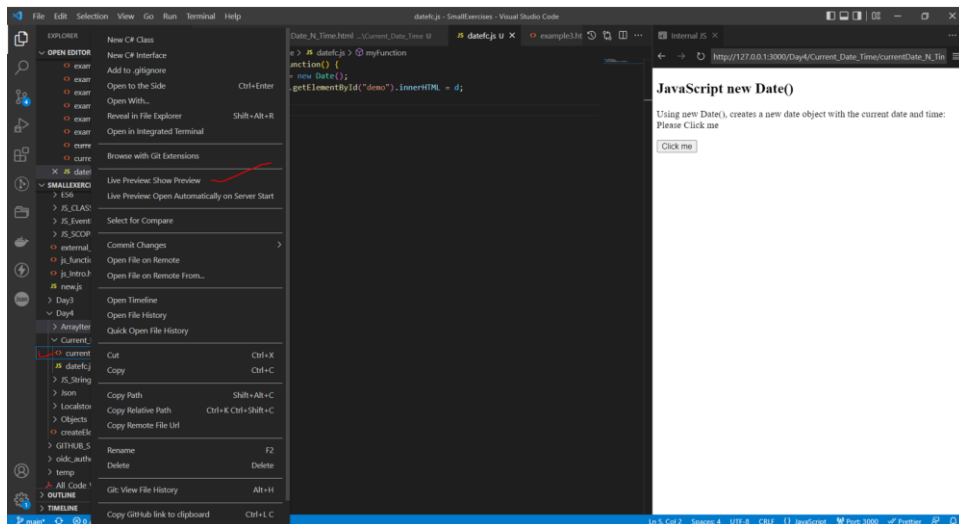

Pic-1

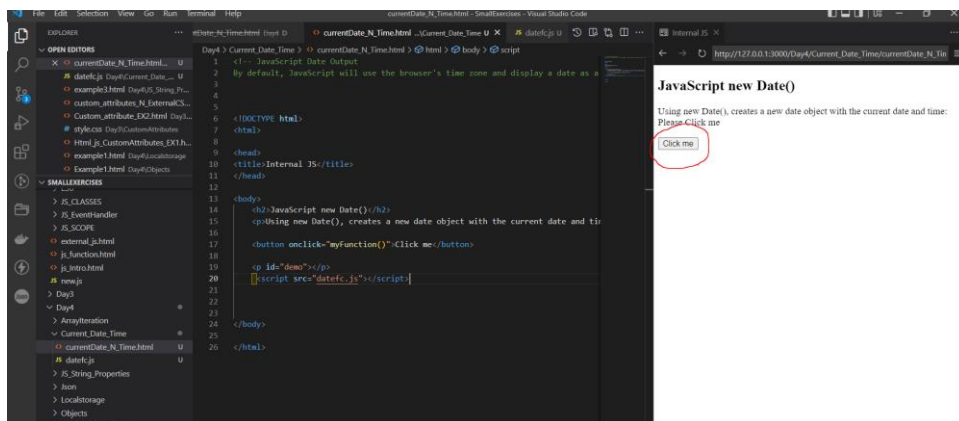

Pic-2:

Right+Click on that file then you will see the option “Live Preview :Show Preview”

Click on that then you will see the output see the below image

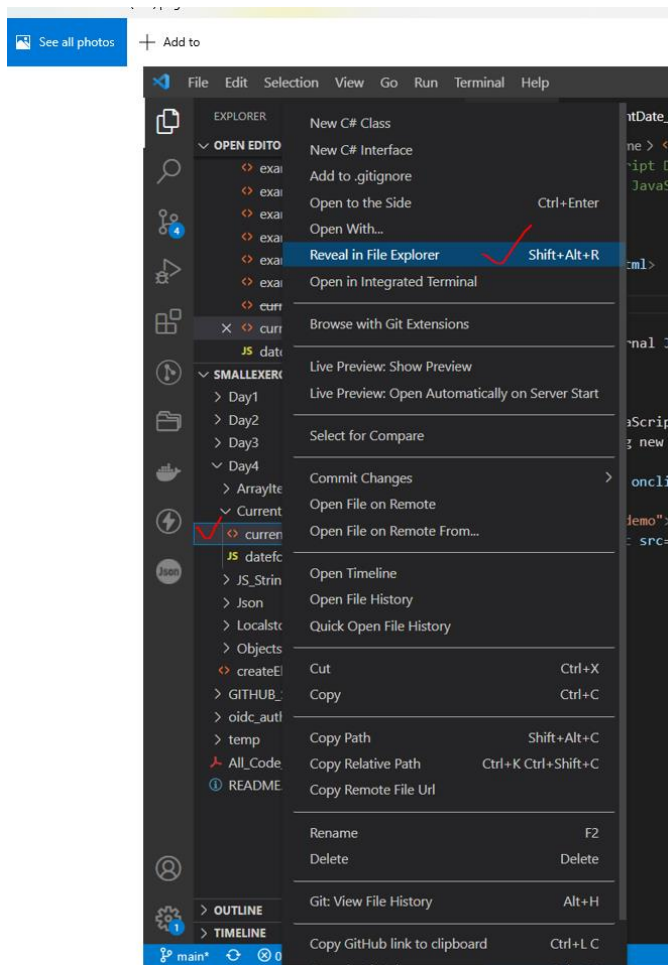

Output:

How to run on the browser:

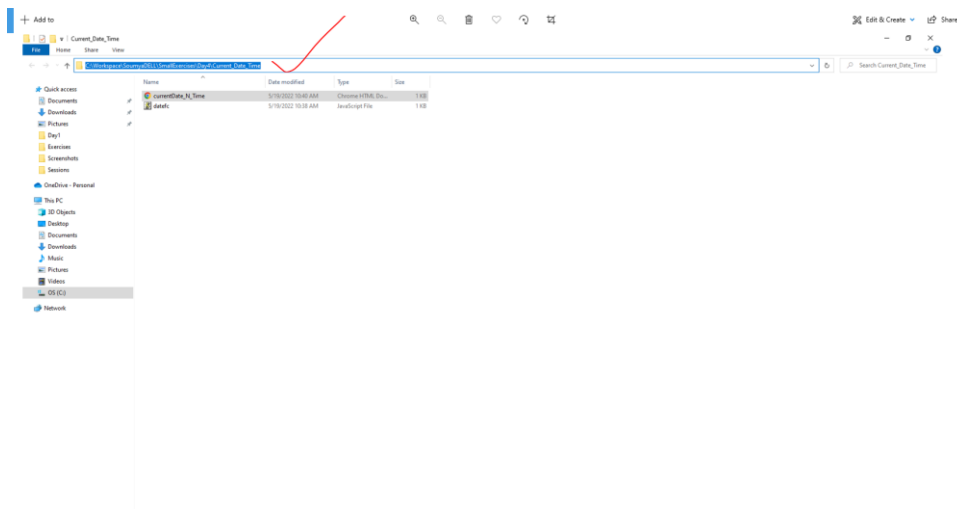

First you need to right+click on that file then you will see the option “Reveal in file Explorer” click on this see the below image

PIC-1:

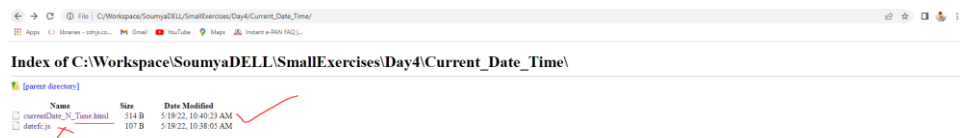

PIC-2:

Copy the folder path

Pic-3:

Paste the folder path on your browser you will see the both files but you need click on **Html file** always.

OUTPUT:

When you click the .html file you will see the output.
